

"SEO is too slow for new websites."

That's what most new businesses believe.

We just proved that wrong.

One of our clients launched a brand new website in mid-April.

60 days later,

they got their **first paid customer from SEO.**

How is that possible?

**SEO takes time... unless you do it
with AI.**

Yes, SEO is still a lot of work—
but now, **most of it can be accelerated with
AI.**

Here's our **AI-powered approach** to rapid
SEO success.

(We'll show examples from our own site due to
NDA.)

Step 1: AI-Generated SEO Strategy Blueprint

We used AI to map 5 topic clusters + a 30-day article calendar.

Each cluster aligns with E-E-A-T to build trust and authority.

 Now a free tool:

hashmeta.ai/seo/content-strategy

Step 2: Agentic AI Workflow for Daily Articles

We set up an agentic AI workflow on Dify to research, write, and publish 1 article/day.

Includes images and infographics—crucial for E-E-A-T.

See example:

hashmeta.com/blog/xiaohongshu-ads-rejection

Step 3: AI-Powered SEO Landing Pages

We went beyond service pages.
AI helped us build pages targeting niche sub-keywords:

- ◆ By industry: Travel, Education, Consumer and more
- ◆ By capability: AI Marketing, Xiaohongshu Marketing and more

We haven't even deployed our full stack yet:

- ✓ Programmatic SEO
- ✓ Interactive mini-tools
- ✓ AI content repurposing

The takeaway:

SEO is no longer a waiting game.

AI lets you get in the game **faster**—and
win.

If you're tired of high CPLs or SEO that doesn't
deliver...
